

FOR IMMEDIATE RELEASE

Fast 2K™ nominated for prestigious Innovation Award

TORONTO, ON – October 22, 2013 – Chemque, Inc.'s new innovative product, Fast 2K™, has been nominated for this year's *Innovation Award* at BATIMAT, the world's leading construction show being held this year in Paris, France.

Fast 2K™ is a convenient alternative to concrete for fixing or setting all types of fence posts, mail boxes, signs, bollards, flag poles and much more. Ready to use and with no water required, one 900g (2 lb) bag of Fast 2K™ replaces up to 2 x 23 kg (50 lb) bags of concrete mix. One pallet of Fast 2K™ replaces a full truckload of concrete. Fast 2K™ expands inside the hole to hold the post in 5 minutes, allowing installers to start building fences in only 15 minutes. Fast 2K™ can even be used during the winter.

"We spent 40 years developing hundreds of successful products at Chemque. Fast 2K™ is the result of years of R&D investment and is one of our most innovative new solutions. The positive response we have received in the marketplace with Fast 2K™ is very encouraging. I guess saving their backs from carrying the heavy bags of concrete is what drove consumers and professional installers to the Fast 2K™ shelves. Fast 2K™ uses the same technology developed by Chemque and that has been applied by major utility companies in North America and Europe to set utility poles for almost 15 years. Our Pole Setting Foam was extensively used on the reconstruction efforts after the Katrina hurricane disaster in New Orleans as it helped restore the power so quickly.," says Sam Ghaly, Chemque's President.

More than 3,500 exhibitors will host over 400,000 visitors from around the globe at the Paris Nord Villepinte Exhibition Centre in Paris, France for this year's BATIMAT.

"In this battle for winning the war against pollution, Batimat nominated Fast 2K for the innovation award not only because of its convenience and speed, but also because they embraced the 96% reduction in Heavy Truck Emission which is their number one target for greenhouse gas conservation. The average annual usage of 128,000 truckloads of concrete for fence post applications in North America could be reduced to only 5,000 of Fast 2K. We are proud of our team's accomplishment and their contribution to saving our planet," says Ghaly.

About Chemque, Inc.

Chemque, Inc. is a manufacturer of chemical specialties and equipment used in a variety of industries including printing, construction, automotive and telecommunications.

Due to Chemque's sophisticated research and development structure over the past 40 years, Chemque has developed numerous market-leading solutions that have assisted customers on every single continent around the globe to succeed.

Chemque solutions range from specialty resins, adhesives and foams to advanced dispensing machines, compact manufacturing lines with curing systems to complete production processes and patented packages.

Chemque's worldwide team of specialized sales and technical representatives, together with a network of manufacturing and warehousing facilities, are prepared to respond quickly to customers' needs wherever they are located.
